These enable the fine fibers and materials in the water to aggregate, and then rely on the buoyancy of the bubbles and the natural upward movement of the dissolved air fibers to bring them to the surface of the water for intelligent collection and reuse. This series of products is suitable for wastewater treatment in industries such as petroleum, chemical, papermaking, leather, dyeing and printing, food, and starch. When used for the treatment of paper mill white water, the treated clear liquid has a SS (suspended solids) level of ≤30PPM, which fully meets the requirements for low-pressure water use in production.
